

About BlueConnex

Primarily an IP network operator, BlueConnex owns, manages and maintains an IP network spanning the four BlueSquare locations, as well as the majority of the London Docklands datacentres providing both layer 2 access as well as IP transit, using a variety of fibre providers.

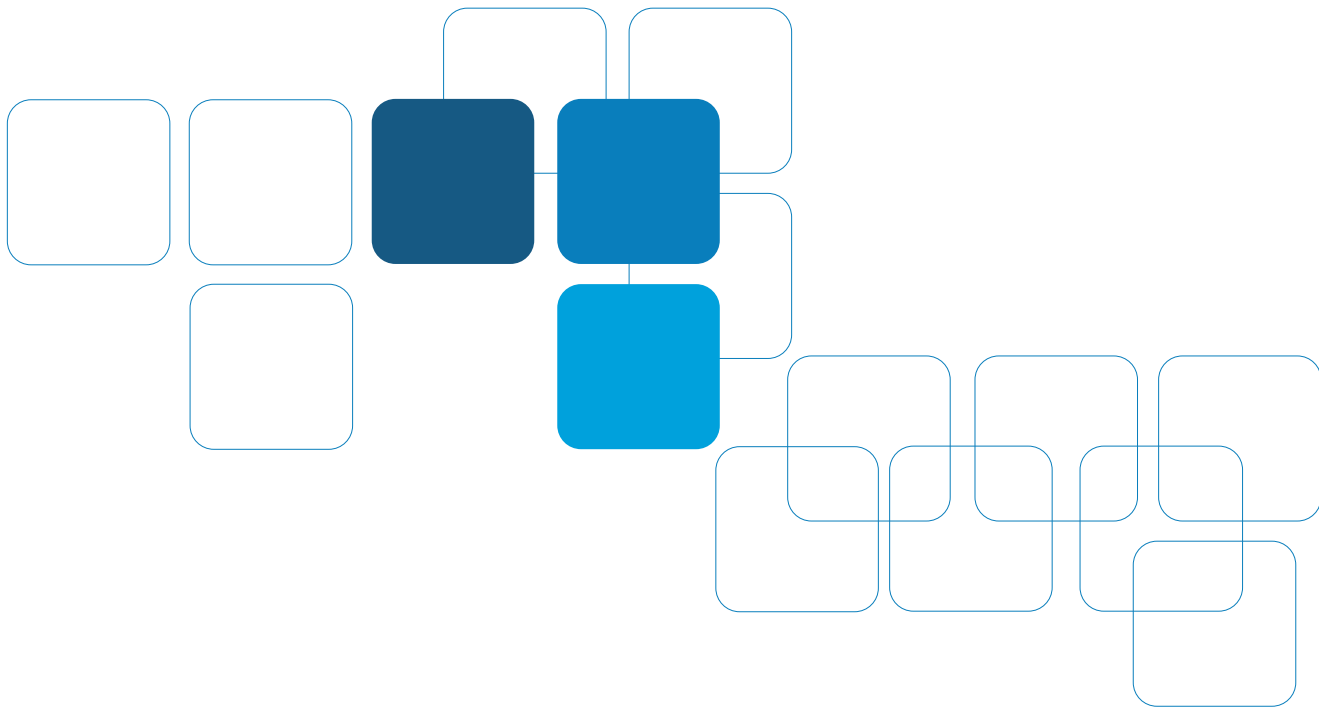

Since 2007 BlueConnex has provided technical consultancy to various ISP and enterprise customers, ranging from individual rack migration solutions to full scale datacentre and network moves.

In addition to this we are continuing to build on our managed service offerings, including managed servers, managed virtual servers, network management and monitoring. As part of the BlueSquare Data Group, BlueConnex are able to provide a one-stop shop solution.

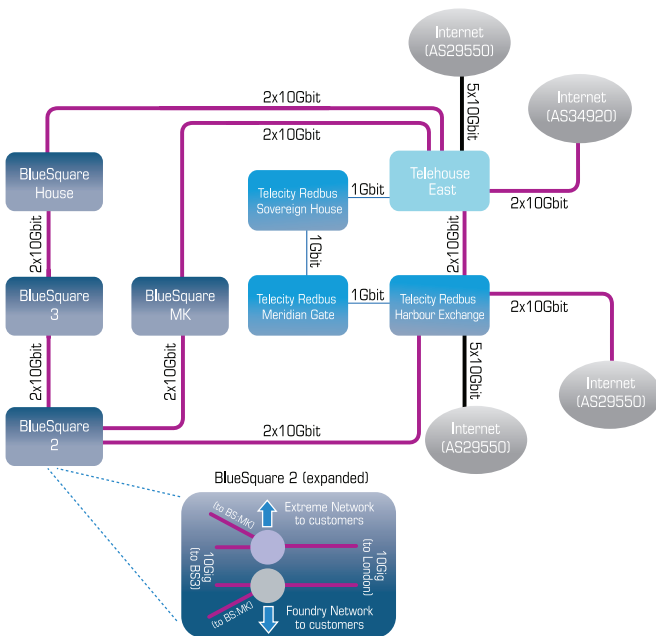

For a list of our products see overleaf.

Products

- **IP Transit and Layer 2 Access Solutions** - We operate a fully redundant BGP network consisting of two separate hardware vendors which provides redundancy not only in the network level, but also on the hardware level.

Connecting with Tier 1 providers, as well as over 250 peerings at the London Internet Exchange (LINX), we are able to provide one of the most resilient IP BGP hand-offs in any of the BlueSquare datacentres.

- **Managed Services** - Our team of highly skilled server engineers can monitor, patch and back-up business critical servers around the clock, removing the headache of managing your server. Solutions are available from one server to a whole cluster of servers.

In addition, we are able to:

- Design and deploy load balanced clusters
- Offer high availability server monitoring
- Offer managed firewall solutions and managed bandwidth solutions.
- **Managed Virtual Servers** - High availability virtual servers with a 100% SLA, residing in different datacentre locations can be achieved utilising our Virtual server platform. We are able to design and implement virtual servers using the proven vmware backbone software.

Standard services include advanced hardware fault detection, allowing seamless migration as soon as a basic hardware fault is detected, enabling us to provide 100% SLA. Whether you need a windows or linux implementation, we are able to help.

- **Migration Solutions** - Using skills developed since BlueSquare began, we have successfully migrated clients from 1 to 85 racks, whether this means moving a single rack from datacentre to datacentre out of hours, or moving twenty five racks worth of servers and then re-racking those servers, we can provide a one-stop solution from planning to proof of concept to implementation. All migrations are carried out using specially adapted air suspension transport.
